1.Zoho Creator AI Application Landing Page

Zoho Creator is a sleek, AI-powered platform designed to help businesses build applications quickly and easily. Its homepage highlights how Indian enterprises can use AI and low-code tools to bring their ideas to life in seconds. The interface feels modern and intuitive, with a simple prompt box inviting users to describe their app needs and watch them come alive.

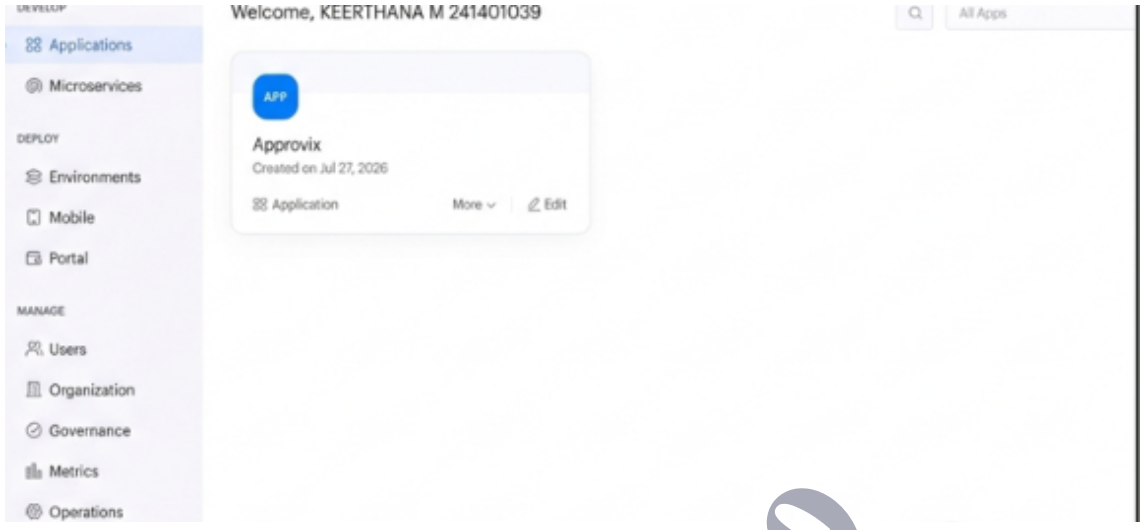

2.Zoho Creator Sign In/Authentication Pool

The sign-in page offers multiple ways to log in — from Google and Facebook to LinkedIn, Apple, and Zoho itself. It even promotes a passwordless sign-in option through OneAuth, making access secure and effortless. The design is clean, with a friendly illustration showing how easy it is to log in without remembering passwords.

3.Zoho Creator User Dashboard

Once inside, the dashboard greets Akshaya warmly and displays the workspace with an app called Approvix. The sidebar neatly organizes everything under Develop, Deploy, and Manage, making navigation simple. It's a professional yet welcoming space for building and managing applications.

4.Multistage Environment Dashboard

The "Environments" page shows how apps can be deployed in different stages — testing and production. It's a clear, structured layout that encourages safe experimentation before going live. The design feels calm and organized, perfect for developers managing multiple versions.

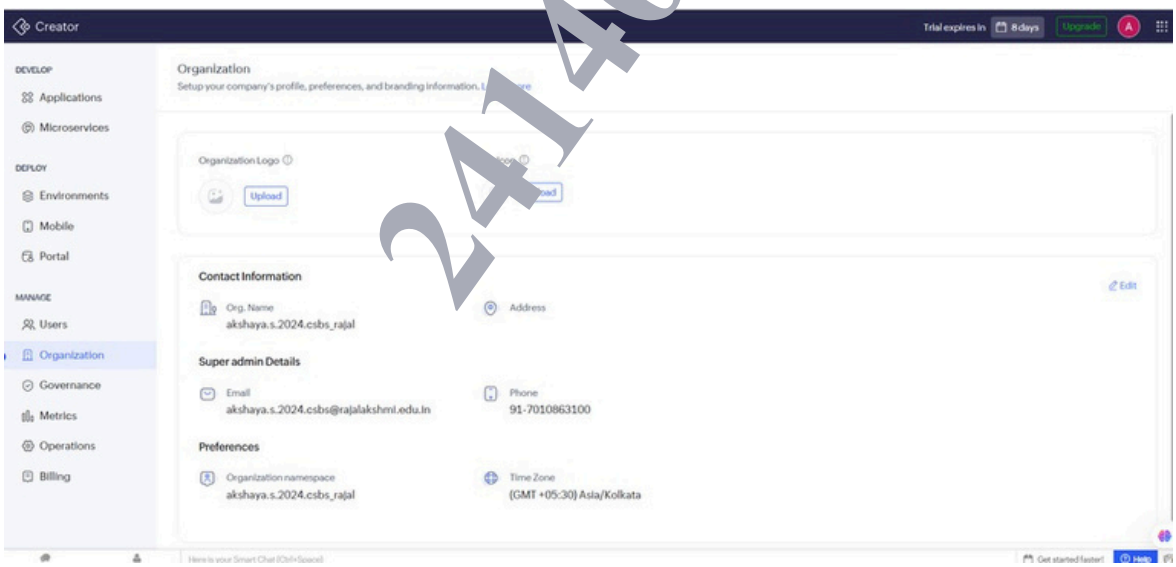

5.User Management and Role Based Access

The “Users” section lists everyone with access to the platform. Akshaya appears as the Super Admin, with an active status. The interface makes it easy to add or filter users, helping teams stay organized and secure.

6.Organization Settings and Profile Setup

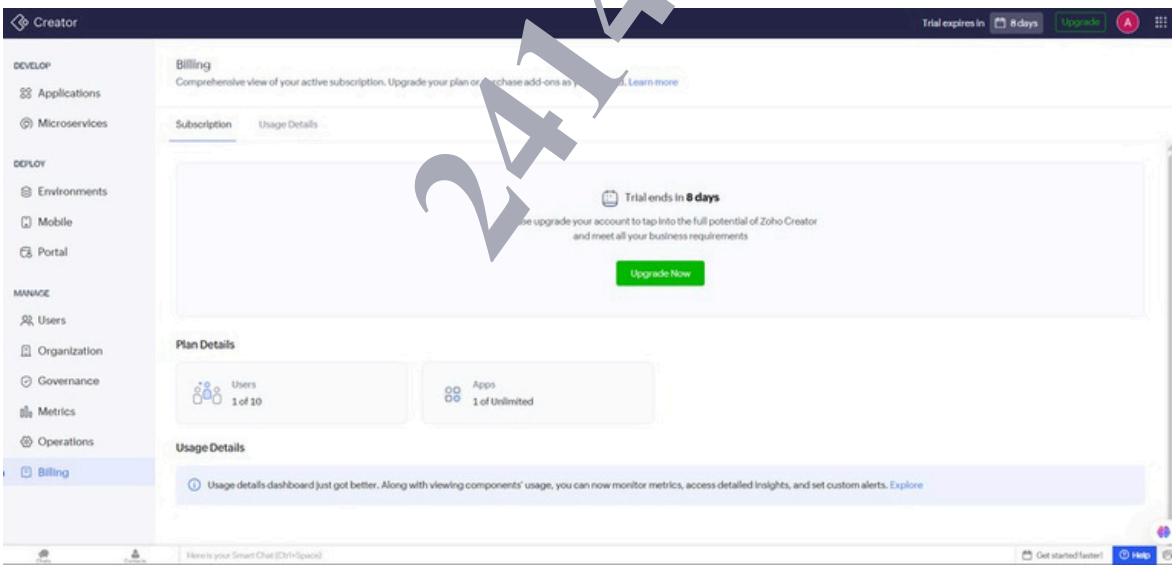

In the “Organization” tab, users can upload logos, set contact details, and define preferences like time zones. It’s all about personalization and branding, giving the workspace a professional identity while keeping administrative details tidy.

7.Metrics and Application Analysis Dashboard

The “Metrics” page provides insights into app activity — though in this case, no data is available yet. It’s designed for tracking usage trends and performance, with charts ready to visualize how apps are being used once data starts flowing.

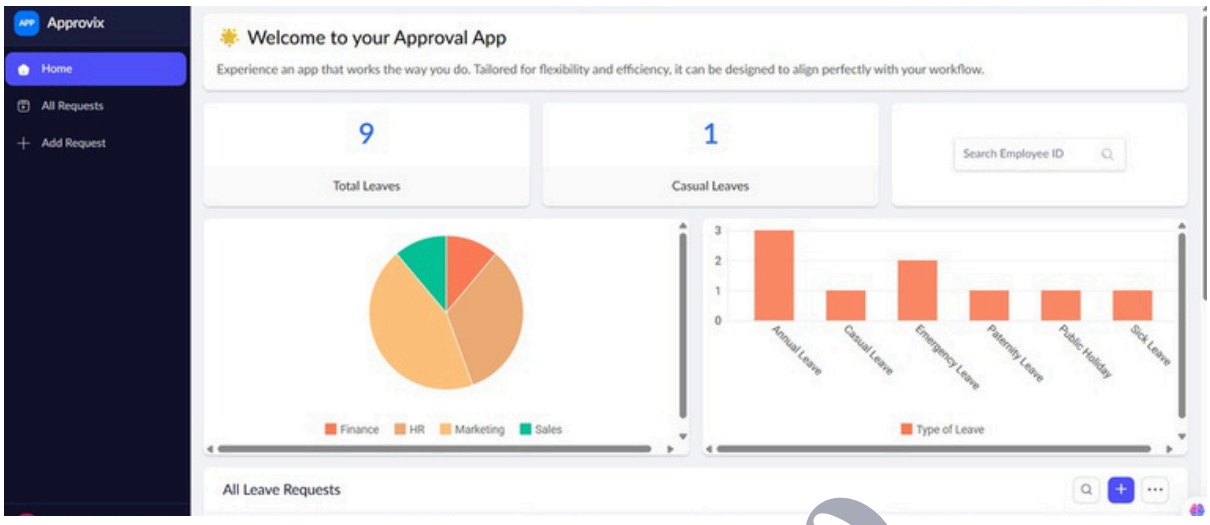

8.Billing and Subscription Management

The “Billing” page shows subscription details and trial status, reminding users when their trial ends and offering an upgrade option. It also displays plan limits and usage stats, keeping everything transparent and easy to manage.

9.Live Custom Application Home Dashboard

Inside the Approvix app, the dashboard summarizes leave requests with charts and tables. It shows total and casual leaves, departmental breakdowns, and reasons for absence. The layout is colorful and data-driven, helping HR teams track employee leave efficiently.

10.Detailed Data Report View

The “All Leave Requests” page lists detailed entries — employee IDs, departments, leave types, reasons, and dates. It’s straightforward and well-organized, making it easy to review and manage requests at a glance.

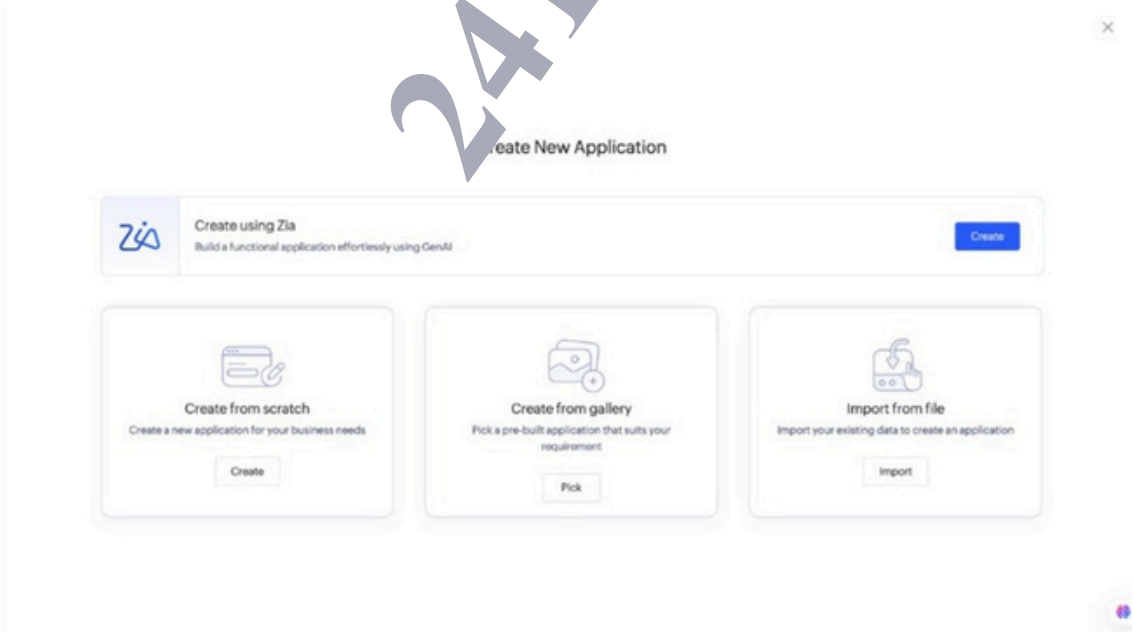

11.Adding Leave Request

The “Add Request” form lets users submit new leave requests. It’s simple and guided, with fields for employee details, department, leave type, and reason. Helpful tips and a link to a video tutorial make it beginner-friendly.

12.Create New Application Options

Finally, the “Create New Application” screen offers four options — build with Zia (AI), start from scratch, pick from a gallery, or import an existing file. It’s flexible and user-centric, catering to both beginners and experienced developers.

13.Gen AI App Builder Prompt Screen

The “App Builder” page introduces Zoho’s Gen AI assistant, inviting users to describe their app ideas so AI can help build them. It’s minimalistic and futuristic, emphasizing ease and creativity.
